DISCHARGE

Thank you for bringing Max to Petfolk today!

Max had a normal physical examination today. A heartworm test was performed and was negative.

**Vaccines Administered Today:**

- **DAPPL**
- **Rabies**
- **Intranasal Bordetella**

We discussed possible vaccine reactions, which may include mild lethargy or soreness. If Max develops facial swelling, profuse vomiting, or significant lethargy, he should be taken to an emergency veterinary clinic immediately.

Preventive Care:

We discussed the importance of monthly flea and heartworm prevention. Max will be continuing Simparica Trio, you are taking home today.

**Monitoring & Recheck:**

Please monitor Max at home following today's vaccines. If any concerning signs develop or if you have any questions, contact the clinic or seek emergency care as needed.
